Cesar Augusto VALADES CRUZ, PhD

Nationality: French and Mexican
Birthdate: 27/11/1985
SERPICO Team, Inria - Curie Institute, UMR144 CNRS.
Email : cesar.valades@gmail.com
12 rue Lhomond, 75005 Paris, FRANCE
Phone : +33 156246798

My research experience ranges from construction/running of advanced optical microscopes to processing/analyzing imaging data together with cell biology applications, as well as, machine learning, data handling, high-content imaging, and visualization of 3D+time data. Working experiences in different countries enable me to work independently and as part of international environments

---

PROFESSIONAL EXPERIENCE

Postdoc/Engineer –Inria and startup Biotech Myriade 01/2021 – 12/2021
Project: Improvement of tracking and size estimation of virus and extracellular vesicles.
Collaboration between SERPICO Team and the Biotech startup Myriade. I develop mathematical models and image processing tools to improve the tracking and size estimation of virus and extracellular vesicles in their system VideoDrop.

Inria Starting Research Position – Team SERPICO Paris with Dr. C. Kervrann and Dr. J. Salamero, 04/2019 – 12/2020
French National Institute for Research in Digital Science and Technology (Inria) & CNRS-Institut Curie, Paris, France
Project: Acquisition, analysis, and visualization of 3D Dynamic cellular imaging of endocytosis/recycling mechanisms in the membrane during cell migration using machine learning.
I work in novel machine learning methods of image processing able to detect the main regions of interest, and automatic quantification of molecular interactions and cell processes. In addition, I collaborate in the development of machine learning-driven navigation and interaction techniques for 3D+Time data enabling the analysis of localized intra-cellular events (endocytosis and exocytosis) and cell processes (migration, division, etc.).

Postdoctoral researcher – Team of Prof. Ludger JOHANNES Curie Institute, Paris, France 01/2016 – 03/2019
Project: Advanced cellular imaging of endocytosis.
Development of 3D image processing and quantification methods to study different modes of endocytosis, using advanced high spatio-temporal resolution imaging and single particle $_{\text{tracking}}$. In addition, I was also responsible of setting up a Lattice Light Sheet Microscope on the PICT-IBiSA imaging facility at Curie Institute, which is part of the France BioImaging National Infrastructure.

University Lecturer **Monterrey Institute of Technology and Higher Education, Mexico** 01/2015 – 12/2015
Teaching Physics, mathematics, and differential equations.

Research Engineer – CNRS Institut Fresnel, Marseille, France 12/2013 – 04/2014
Responsible of developing image processing and quantification methods for super-resolution microscopy (dSTORM).

Ph. D with Dr. Sophie BRASSELET and Dr. Pablo LOZA-ALVAREZ
Institut Fresnel, Marseille, France & Institute of Photonic Sciences, Barcelona, Spain 12/2010 – 07/2014
Thesis: Polarized Super-Resolution Fluorescence Microscopy
Implementation of a novel method of super resolution microscopy, in combination with a polarized detection to study molecular orientation behaviors, to report structural information at the single molecule and at nanometric spatial scale.

EDUCATION

12/2010 – 07/2014	**Erasmus Mundus PhD in Photonics Engineering, Nanophotonics and Biophotonics** **Mentión Très honorable. Sobresaliente. Cum Laude.** Aix-Marseille University, France & Polytechnic University of Catalonia, Spain
08/2008 – 07/2010	**Erasmus Mundus M. Sc. in Biophotonics for telecommunications and biotechnologies** **GPA: 14.4/20 "Magna Cum Laude"** Ecole Normale Superieure de Cachan, France & Complutense University of Madrid, Spain
08/2009 – 12/2011	**MEng. in Quality Systems and Productivity.** **GPA: 90.7/100** Monterrey Institute of Technology and Higher Education, Mexico
08/2003 – 05/2008	**B. S. in Mechatronics Engineering.** **GPA: 92/100 "With honors"** Monterrey Institute of Technology and Higher Education, Toluca, Mexico

Reviews & comments

[1] Johannes, L., Valades-Cruz, C. A. The final twist in endocytic membrane scission. Nature Cell Biology (2021)

Review assignments journals: Bioinformatics, PLOS Computational Biology & Journal of Physical Chemistry Letters

ADDITIONAL SKILLS

Computational Languages & Tools: MATLAB, Python, C/C++, LabVIEW, Java, ImageJ/FIJI, Icy, IMARIS, GPU programming, Parallel computing, TensorFlow, Keras, Machine Learning, R, Prism, Microsoft Excel, Zen celldiscover, IDEAS(ImageStream)
Languages: English, Spanish and French.

Ongoing PROJECTS & COLLABORATIONS

2019 **Project NAVISCOPE: image-guided navigation and visualization of large data sets in live cell imaging and microscopy.** INRIA IPL project, initiated to implement novel machine-learning methods able to detect the main regions of interest, and automatic quantification of sparse sets of molecular interactions and cell processes during navigation to save memory and computational resources.

2019 **Project BioImageIT: open-source integrator for Image DATA management and analysis.** Ongoing project of the Serpico TEAM in the frame of the NRI (National Research Infrastructure – France BioImaging) and dissemination toward the 18 Imaging Facilities that constitute the Core of the Infrastructure.

2019 **Project: Ultrastructure imaging of actin assemblies imaged by polarized light sheet microscopy.** Ongoing collaboration in the frame of France BioImaging R&D program for image processing of polarized light sheet microscopy data with Dr. Sophie Brasselet, Institut Fresnel.

2017 **Project ANR: Data Assimilation and Lattice LIght Sheet imaging for endocytosis/exocytosis pathway modeling in the whole cell (DALLISH).** Collaboration to investigate endocytosis pathways in the whole cell using 3D single particle tracking.

Fellowships & distinctions

2020-2022 Member of the Mexican National Research System (SNI 1)

2010-2014 Erasmus Mundus Fellowship for PhD

2008-2010 Mexican National Council of Science and Technology (CONACyT) fellowship for Master

2008-2010 Erasmus Mundus Fellowship for Master
